Frontend Developer & AI Engineer | React · Next.js · LLM Engineering · RAG

EXPERIENCE

Frontend Developer Intern
July. 2026 – present

Perapole

- Working as a **Junior Frontend Developer** on a **B2B web platform**, building and maintaining customer-facing features with React.js, Next.js, and TypeScript.
- Implemented **state management using Context API and Zustand** to handle shared application state across the platform.
- Took part in **automating the production of guide/tutorial videos using n8n**, streamlining the content workflow process and reducing manual effort.
- **Technology Stack**: HTML, CSS, JavaScript, React.js, Next.js, TypeScript, Tailwind CSS, Context API, Zustand.
- Gained hands-on experience with the React ecosystem, including **shadcn/ui, Radix UI, and Zod**.

Software Engineering Intern
July. 2025 – Aug. 2025

HERA ALKU/UZEM

- Developed "HERA" (Healthy Elders' Records Assistant), a standalone application designed for the **"Tazelenme University Digital Campus Project"** to digitize and manage elderly students' records.
- Contributed to the full Software Development Life Cycle (SDLC) including **requirements analysis, UI/UX design, and database architecture.**
- **Implemented core functionalities**; and ensured seamless integration between the frontend interface and the backend database.

Graduation Project
Sep. 2025 – June. 2026

SignaTurk ALKU

- SignaTurk aims to eliminate communication barriers between hearing and deaf/hard-of-hearing individuals by acting as an AI-powered, real-time, and bidirectional **"digital translator"** between **Turkish Sign Language (TSL) and Turkish**.
- There are two main modules. The first detects movement in front of the camera, prints it to the screen, and vocalizes it using text-to-speech. The second detects spoken words and plays animations drawn with Unreal Engine Metahuman technology on the screen.
- During this process, I was involved in activities such as **training the model** with the collected dataset, evaluating the trained model, and conducting analyses.

Lead Instructor, Co-Organizer
16 Oct. 2025

Git/Github Bootcamp NEXUS ALKU

- Designed and delivered a comprehensive **"Git/ GitHub Bootcamp"** focused on real-world scenarios for engineering students at Rafet Kayis Faculty of Engineering.
- Facilitated hands-on training covering version control fundamentals, branching strategies, pull requests, and collaborative development workflows.

Altira Rocket Team
July 2025 – present

Software Engineering ALKU-Alanya

- Contributing to technical documentation (Preliminary and Critical Design Reports) by detailing the **software architecture, state machines, and fail-safe protocols.**

PROJECTS

SupplyHub | *Next.js, NestJS, TypeScript, PostgreSQL, WebSocket*

- Designed and built **SupplyHub**, a full-stack **B2B wholesale marketplace** connecting sellers and buyers, modeling real-world B2B complexity such as **tiered pricing, RFQ negotiation, corporate approval workflows, and live auctions**.
- Built the **frontend** with **Next.js 16 (App Router)** and **TypeScript**, using Tailwind CSS + shadcn/ui, react-hook-form/Zod validation, Recharts analytics, next-intl (TR/EN) localization, and Zustand-managed real-time auction state over Socket.IO.
- Built the **backend** (**supplyhub-api**) with **NestJS 12** and **Prisma ORM** over Supabase PostgreSQL, implementing JWT access/refresh auth with OTP email verification, role-based access control, and an embedded WebSocket gateway for live bidding.
- Engineered a **race-condition-safe bidding engine** using atomic Postgres transactions (conditional `updateMany`) instead of a distributed lock, plus a scheduled sweep service to auto-close expired auctions.
- Conducted a full **security audit** (JWT signature verification, ownership checks, upload allowlisting, localized error handling) and covered the system with **21 unit tests (Vitest)** and **31 E2E tests (Playwright)**, wired into a **GitHub Actions CI/CD** pipeline deploying to Vercel and Railway.

AI Deal-Hunting Agent System | *Python, OpenAI API, QLoRA Fine-Tuning, Multi-Agent Architecture*

- Capstone project for the **AI Engineer Core Track (LLM Engineering, RAG, QLoRA, Agents)** by Ed Donner: built an **autonomous multi-agent system** that scans live deal feeds, predicts fair market prices, and notifies on standout bargains.
- Benchmarked **10 frontier models** (e.g. GPT, Claude, Gemini) against **10 open-source models** on a price-prediction task, then **fine-tuned an open-source model with QLoRA** to approach frontier-model accuracy at a fraction of the inference cost.
- Orchestrated specialized agents (scanning, pricing, messaging) collaborating asynchronously to identify and surface deals in real time.

RAG Knowledge Worker | *Python, Retrieval-Augmented Generation, Vector Embeddings*

- Built a **Retrieval-Augmented Generation (RAG)** system that ingests company documents and answers questions as a domain-expert assistant.
- Also completed applied LLM projects in the same track: an AI-powered website brochure generator with intelligent site navigation, a multi-modal airline customer-support agent with function-calling, an audio-to-meeting-minutes tool, and a Python-to-C++ code optimizer achieving a **60,000x** performance gain.

HERA (Healthy Elders' Records Assistant)

- Co-developed a **full-stack standalone application** for ALKÜ Tazelenme University to digitize and manage elderly students' academic and health records.
- Implemented core functionalities including database architecture, UI/UX design, and seamless integration between frontend and backend systems.
- Presented the final product to the **University Rector and Board of Directors**, demonstrating the projects technical feasibility and social impact.

Frontend Development Portfolio | *HTML, CSS, JavaScript, Tailwind CSS, React*

- Developed a collection of responsive web applications including a **Movie Tracking App** and a **Weather App**, focusing on REST API integration and asynchronous data fetching.
- Built a dynamic **Restaurant Page** and a **Task Management (Todo) System**, implementing DOM manipulation, local storage, and complex UI layouts using Tailwind CSS.
- Focused on writing **semantic HTML** and clean, modular JavaScript code following modern web standards and accessibility principles.
- Managed project versions and deployment workflows using **Git/GitHub** and Netlify/Vercel for continuous integration.

EDUCATION

Alanya Alaaddin Keykubat University Sep. 2021 – June 2026
B.Sc. in Computer Engineering Antalya, Turkey

Fatih Anadolu High School Sep. 2016 – June 2020
Secondary education Rize, Turkey

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, Python, SQL (PostgreSQL, MySQL), HTML5, CSS3
Frameworks/Libraries: React.js, Next.js, NestJS, Tailwind CSS, shadcn/ui, Radix UI, Zod
State Management: Context API, Zustand
AI / LLM Engineering: RAG (Retrieval-Augmented Generation), Fine-Tuning (QLoRA), Multi-Agent Systems, Prompt Engineering, OpenAI API, Frontier & Open-Source LLM Evaluation
Developer Tools: Git, GitHub, Vercel, Netlify, Railway, Figma, Docker (Basic), n8n
Other: Flask, PyQt6 (basic backend/desktop experience), Prisma ORM, WebSocket (Socket.IO)
Languages (Spoken): Turkish (Native), English (B2 - Intermediate)

CERTIFICATIONS

Ed Donner (Udemy): AI Engineer Core Track – LLM Engineering, RAG, QLoRA, Agents (2026)
The Odin Project: Full Stack JavaScript Path (Jan. 2026 – Present)
Udemy: React from Beginner to Advanced – Next.js, Context API, React Query, *Jonas Schmedtmann* (June 2026); Tailwind CSS From Scratch, *Brad Traversy* (Sept. 2025)
freeCodeCamp: Front-End Development Libraries Certification (June 2026)
